## 1. Introduction

Razavi Hospital -a non-governmental hospital established by Astan Quds Razavi- has focused on education and research activities besides to its health improving services in order to achieve the policies highly regarded by Astan Quds Razavi. Therefore, the hospital decided to establish an International Journal of Medicine with the aim of publishing highly qualified and scientific articles in accordance with recent scientific achievements. Members of the editorial board of the journal are carefully chosen and are all excellence in their own special scientific field. A broad vision has been outlined for the future of Razavi Journal by its scientific and managing board and committee. Supports of Astan Quds Razavi besides the close collaboration of a reliable publisher are considered as essential factors to achieve the scientific committee's goal.

The 1st issue of Razavi International Journal of Medicine has been organized based on the above approach and according to the submitted articles over a period of three months. During this period, 140 people collaborated with the journal in the role of authors and reviewers. Totally 35 articles in different medical fields were submitted to the journal website, 13 of which successfully passed the standard peer review process within the 1st issue deadline and 10 articles were finally considered to be published in the 1st issue.

Variety in type and field was the major feature applied in layout of the articles in the 1st issue of the journal. Therefore, this issue includes two editorials, two reviewed and four original articles as well as one case report and one meeting report.

## 2. A Brief Look Inside

Personalized Cancer Medicine is an applicable and up-

to-date issue in medicine, covering all medical aspects from diagnosis to treatment. Dr. GH. Karimian believes that clinical decision- makings will be presented based on the individual's genetic information in near future, resulting in improving in the quality of treatment. Identification of genes involved in diseases and gene mutations to determine the people at risk is the subject of intensive debates in various communities.

Vast developments have been occurred in the field of molecular medicine, especially in identification of miRNA. Several studies have been achieved on cancer and non- cancer diseases related to miRNA. Dr. Amina Shah and Dr. Aftab Ahmad have paid more attention in their article to the role of miRNA in development and differentiation of Mesenchymal stem cells (CMSCs) and various application of this small molecule. This review article may be used as a reliable reference for other researches.

Significant developments have been occurred in diagnosis and management of epilepsy. PNEA has always been considered due to its economical and psychological complications. LTM is a golden diagnostic standard which is recently applied in this regard. Dr. Hakak et al. have offered up-to-date and valuable information in their article.

Breast feeding is one of the most important issues in Mother and Child Health and is highly emphasized by WHO particularly in developing countries. The qualitative study achieved by Maryam Amini et al. provides useful information about poor breast feeding and malnutrition in childhood

## 3. Concluding Remarks

Razavi Hospital intends to pave the way for publishing the scientific findings and achievements in medical

### Implication for health policy/practice/research/medical education:

Razavi Hospital intends to pave the way for publishing the scientific findings and achievements in medical field through establishing Razavi International Journal of Medicine. All scientists and scientific societies associated in various branches of medicine are invited to collaborate us in providing a friendly environment in order to improve scientific interactions and develop human knowledge regardless of their nationality, race and religion.

field through establishing Razavi International Journal of Medicine. All scientists and scientific societies associated in various branches of medicine are invited to collaborate us in providing a friendly environment in order to improve scientific interactions and develop human knowledge.
